                                                                                                                                                                                                                                                               Gaps
                                                      The sequence is that of a polypeptide comprising at least one antigenic portion of a Babesia microti antigen. It can be used to diagnose B. microti infection by detecting specific antibodies in usual immunoassays. Infection can also be diagnosed using:

(a) primers or probes derived from the coding sequence, in standard amplification or hybridisation tests, or (b) using antibodies to detect the corresponding antigen. It is also useful in vaccines to protect against infection, especially when formulated with an adjuvant. The new diagnostic methods allow rapid differentiation between B. microti infection and other tick borne diseases (Iyme disease and ehrlichiosis) that have similar symptoms but require different treatments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence is that of a polypeptide comprising at least one antigenic portion of a Babesia microti antigen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes isolated polypeptides comprising specific immunogenic portions of Babesia microfil, AAX88994 and encode specifically claimed B. microfi immunogenic proteins, and AAY24327 to AAY24338 represent these proteins. B. microfi polypeptides and nucleic acids can be used for detecting B. microfi infections. They can also be used in vaccines for inducing protective immunity against B. microfi infections. The present sequence represents a B.microti antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present invention relates to novel Babesia microti antigens and the coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Babesia microti; antigen; immunogen; diagnosis; infection; vaccine; immunity; detection.
                                                                                                                                                                                                                                                                                                     New Babesia microti antigens, useful for diagnosing and treating B. microti infection, and as component of a composition for enhancing immune response against B. microti infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 245;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is related to the isolation of antigenic sequences from the rodent parasite Babesia microti. This organism is transmitted to humans by the same tick which transmits Lyme disease and ehrlichiosis. The organism causes a malaria-like infection known as babesiosis. The sequences identified by this invention can be used in the diagnosis, prevention and treatment of babesiosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptides containing an antigenic portion of Babesia microti antigen and DNAs encoding the polypeptides, useful for diagnosing, treating or preventing B. microti infection, or for inducing protective immunity in a patient

from the rodent parasite Babesia microti. This organism is transmitted to humans by the same tick which transmits Lyme disease and ehrlichiosis. The organism causes a malaria-like infection known as babesiosis. The sequences identified by this invention can be used in the diagnosis, prevention and treatment of babesiosis.
                                                                                                                                                                                                                                                                    New polypeptides containing an antigenic portion of Babesia microti antigen and DNAs encoding the polypeptides, useful for diagnosing, treating or preventing B. microti infection, or for inducing protective immunity in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

B. microti polypeptides and nucleic acids can be used for detecting B. microti infections. They can also be used in vaccines for inducing protective immunity against B. microti infections. The present sequence represents a B.microti antigen BMNI-17 degenerate repeat sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention describes isolated polypeptides comprising cific immunogenic portions of Babesia microti.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              02-JUL-1999;
06-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel Babesia microti antigens and their coding sequences. The B. microti antigens, antigenic epitopes of such antigens, and compositions comprising such antigens are useful for diagnosing and treating B. microti infection. The compositions are especially useful for enhancing immune response against B. microti infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                           Homer MJ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleic acid molecule encoding an inflammation-associated polypeptide is used in preventing, treating or ameliorating a medical condition .

The present invention relates to the isolation of novel human uterine motility-association polypeptides, and cDNA (AAS28936-AAS28994) and genomic sequences encoding for these polypeptides.

The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAU18094-AAU18152 represent novel human uterine motility-association polypeptides.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated polypeptide and nucleic acid molecules for treating, preventing and/or prognosing disorders related to uterine motility e.g. disorders associated with pregnancy and the menstrual cycle-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; cardiant; vasotropic; cerebroprotective; nootropic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnoshing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, choperproliferative disorders e.g. recubrassis of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, serebrovascular disorders e.g. cardiac arrest, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders e.g. corneal infection, and many other and would healing and epithelial cell.proliferation, to convent ell manner before convented to the convented of the convented

```
The present invention relates to the isolation of novel human calcium-binding proteins, and cDNA (AAS31577-AAS31654) and genomic sequences encoding for these proteins. The sequences of the invention are useful in the diagnosis, prevention and/or prognosis of diseases associated with aberrant calcium flux. Such disorders include neurological diseases (e.g. amylotrophic lateral sclerosis, ALS), immune dysfunction (e.g. severe combined immunodeficiency, SCID), disease (e.g. cancer), blood disorders (e.g. irritable bowel syndrome, IBS), neoplastic disease (e.g. acquired immunodeficiency syndrome, ALDS). The novel calcium-binding proteins are also useful as screening tools to infectious disease (e.g. acquired immunodeficiency syndrome, ALDS). The novel calcium-binding proteins are also useful as screening tools to identify antagonists and/or agonists that may enhance or inhibit activities mediated by calcium-binding proteins. The polynucleotides of the invention are also useful in gene therapy. AV(19892-AA(1969) represent the novel human calcium-binding proteins.

Specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; cytokine; cell proliferation; cell differentiation; growth factor; haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemokinesis; thrombolysis; oncogenesis; proliferation; metastasis; cancer; tumour; haematopoietic disorder; myeloid cell disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cytostatic; osteopathic; vasotropic; cardiant; virucide; antibacterial; antifungal; vulnerary; antiulcer.

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer -

Claim 20; Page 179-181; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABB10981-ABB12330 represent nucleat caids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleicide of the invention, methods of producing the novel polypeptides of the invention. Although novel, many of the nucleotides or polypeptides in a sample, and methods of identifying compounds which bid bid to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential thesapeutic applications. The polypeptides of the invention may have various activities; stem cell growth factor activity; therethy differentiation activities; stem cell growth factor activity; hammunomodulatory activity; activin. or inhibin-related activities; chemotactic or chemokinetic activities; propaptides and nucleotides of the invention are useful for preventing, treating or mationating medical involved in oncogenesis, cancer cell proliferation or metastasis.

Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or amaliorating medical cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell disorders, chronic inflammatory conditions (e.g., asthma or arthritis), arschamia, bone disorders (e.g., osteoporosis), and abnormal disorders (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders call growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells autoprices are dispersed in the diagnosis of the cape to admine or replace cell growth. For example, such polypeptides and nucleotides may ac

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 4, Application US/08878283
Patent No. 5852171
GENERAL INFORMATION:
APPLICANT: Fukudome, Kenji
APPLICANT: Esmon, Charles T.
TITLE OF INVENTION: Cloning and Regulation of an Endothelial
TITLE OF INVENTION: Call Protein C/Activated Protein C Receptor
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Patrea L. Pabst
                                                                                                                                Sequence 4, Application US/08289699A

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

2. SUBCELLUING METHON'S INTEGRAL DOIMBLAND.

2. SUBCELLUING LECATION: Integral membrane protein.

2. SUBCELLUING LECATION: Integral membrane protein.

2. CNS, the emerging dorsal root ganglia and cranial ganglia. In the CNS, expression is uniform along the rostrocaudal axis. During gastrulation, it is expressed within the anterior neural ectoderm. At E10, expression is strong in the ventricular zones (WZ) in all sectors of the brain, and lower in the marginal zones (WZ) in all setween E12 and E15, expression is prominant in the brain. It is breadminant. The intensity is higher in all VZ, and lower in differenciating fleids than in VZ, except in the cerebral hemispheres, and to a lesser extent in the tectum and cerebrallum. A weak expression is also observed in the fetal lungs, kidney and epithelia. In the newborn and postnatal stages, expression remains restricted to the VZ as well as in migrating and postmigratory cells throughout the brain.

2. TISSUE SPECIFICTY: Expressed in the CNS and in the eye.

3. SIMILARITY: CONTAINS 9 CADHERIN DOMAINS.

4. SIMILARITY: CONTAINS 1 LAMININ GF-LIKE DOMAINS.

5. SIMILARITY: CONTAINS 1 LAMININ GF-LIKE DOMAINS.

5. SIMILARITY: CONTAINS 1 LAMININ GF-LIKE DOMAINS.

6. SIMILARITY: CONTAINS 1 LAMININ GF-LIKE DOMAINS.

SEQUENCE OF 19-109 FROM N.A., AND VARIANT SER-64.

Han M., Hannick L.I., DiBrino M., Robinson M.A.;

"Polymorphism of human CD1 genes.";

Tissue Antigens 54:122-127(1999).

-I FUNCITION: NOT KNOWN.

-I SUBGELLULAR LOCATION: Type I membrane protein.

-I SUBCELLULAR LOCATION: Type I membrane protein.

-I TISSUE SPECIFICITY: SARRESSED ON CORFICAL THYMCYTES, ON CERTAIN

T-CELL LEUKEMIAS, AND IN VARIOUS OTHER FISSUES.

-I SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.

-I DATABASE: NAME-PROW; NOTE—CD guide CD1 entry;

--- TISSUE SPECIFICITY: Expressed in the brain, where it is localized principally in the ependymal cell layer, choroid plexus and the area postrema. Also found in spinal chord and in the eye.
--- SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
--- SIMILARITY: CONTAINS 9 CADHERIN DOWAINS.
--- SIMILARITY: CONTAINS 2 LAMININ G-LIKE DOWAINS.
--- SIMILARITY: CONTAINS 1 LAMININ GF-LIKE DOMAINS.
--- SIMILARITY: CONTAINS 1 LAMININ EGF-LIKE DOMAIN.
